

MyKey™ Version 1.1

Release Notes and Known Limitations

1 RELEASE NOTES

1. MyKey is supported on all disgo firmware versions 2.01 and higher.
2. KeySafe supports disgo units with capacities of up to 512MB.

2 KNOWN LIMITATIONS

- **Incorrect Error Message**

An incorrect error message is displayed when disgo is removed from the USB port without being ejected first. Before removing your disgo, you must select the eject option from the MyKey console or from the Windows options.

- **Language Support**

The computer's regional setting (locale) must be set to the appropriate language to support international settings.

- **Secured Zone**

If you enable write protection while using the privacy zone option, the system will turn you over to the public zone.

- **Multiple disgo Support for Windows Me**

The MyKey application currently supports up to two disgo units.

- **disgo Formatting**

disgo cannot be formatted when the MyKey console is open. You must close the console to format disgo.

- **disgo Capacity Size**

To update the capacity size in MyKey after formatting disgo, you must eject the disgo unit and reinsert it.

- **Disk Space Requirements**

The MyKey application requires ~1.9MB of the total free disk space on your computer.
